3. Open Threads / Not Yet Traced

- Full addresses still needed for the five minor peel wallets listed above (CteJJ2kT, AehE6DJL, AHx4K3tb, 8UUr4oag, 6n2ccgP3) — low dollar value, low priority.
- BffpoEjo's other recurring counterparties (Bi2jine2...S7vafjQN, 77knvPDp...6ye8CJAm) show a 7+ day pattern of repeat inflows/outflows — worth a look in case they reveal additional infrastructure.
- \$WICKED mint authority / freeze authority status not yet confirmed — need to verify whether the compromised wallet also held deployer control (mint/freeze authority, LP ownership). If so, this is a live risk beyond the funds already stolen.
- DTAVTDQ3...Qzndb8dY “Extra Tags” field on Solscan not yet checked for community-sourced labels.

4. Monitoring Checklist (re-check periodically)

- HtdQ9Yp7...1tqb7f7H — currently static, \$4,502.10. Flag immediately if it moves.
- GqsNwdgX...qio4jS5f — currently static, \$838.58 remaining. Flag immediately if it moves.
- DTAVTDQ3...Qzndb8dY — monitor balance and activity; this is the freeze-request target.

5. Action Items

1. File IC3 report (ic3.gov) with full trace details.
2. File local PD report; obtain case number.
3. Draft and submit freeze request to Circle (USDC) — attach case number once available.
4. Draft and submit freeze request to Tether (USDT).
5. Submit freeze request to Paxos (PYUSD) — low amount (\$6.91), lower priority but include for completeness.
6. Verify \$WICKED mint/freeze authority status with client.
7. Confirm client has revoked all wallet approvals on the compromised wallet.
8. Pull full (untruncated) transaction signatures from Solscan for every hop before final law-enforcement submission.
9. Re-check static wallets (Section 4) on a regular interval; log any movement immediately.

6. Methodology / Session Log

All data gathered via manual review of Solscan (solscan.io) account and transfer pages. Screenshot timestamps spanning approximately 00:28–01:42 on July 19, 2026 were used to reconstruct the

timeline. No third-party forensic tooling (Chainalysis, TRM, Elliptic) was used — this trace relies entirely on publicly available block explorer data.

7. Billing Log

[Add time entries here as work progresses — date, activity, hours/flat fee]

Evidence Appendix — Blockchain Explorer Screenshots

The following screenshots were captured from the Solscan public block explorer (solscan.io) on July 19, 2026, and document each step of the fund trace. All records shown are publicly verifiable on the Solana blockchain.
